£5.2 million

CONTRACTOR

ISG

START - COMPLETION DATE

September 2019 - January 2021

SECTOR

Blue Light

FORM OF CONTRACT

JCT Design and Build 2016

DELIVERY TYPE

New build

KEY KPIS

The latest in its work with Cheshire Fire and Rescue Service (CFRS), this project sees ISG demolish the existing city centre fire station and build a brand-new facility in its place. The team is also creating an offsite constructed temporary station on adjacent land so that services can continue during the work.

Taking shape over three stages, once the temporary building is open, the old station will be demolished and work will begin to create the new facility.

On completion, Chester Fire Station will be a state-of-the-art facility that will include a training building and tower, an aerial ladder platform, and a specialist water rescue unit.

The new steel frame building has a contemporary design, which has been optimised to reduce energy costs and maximise its sustainable credentials, completed with a metal roof and a feature panel made from Cheshire brickwork. The new fire station will also include community facilities to further encourage integration and knowledge sharing with Chester residents.

Community investment

ISG is keen to maximise the economic, social and environmental benefits to the local area as a whole during time on site, and are already doing so by:

- Hosting four work experience placements
- Delivering 90 apprentice weeks
- Raising money for community funds, such as a £1500 donation to The Fire Fighters Charity
- Giving the community an insight into the construction process by inviting them to watch the demolition process

Iain Gammack, Project Manager, IKG Consulting

ISG has a strong track record in delivering state-of-the-art facilities for our blue light clients, and this latest project is yet another challenge they are already rising to.

The three phases will ensure our emergency services are able to continue their crucial work while we work to bring them a new city centre facility.
